ANSARI NAGAR, NEW DELHI - 110 029.

Press Information 4th March 2011
~~Death Summary~~

Patient's Name : Shri Arjun Singh, 81 years male
Date of admission : 29.01.2011
Place of admission : Old Private ward Room No. 301, AB8 (ICU)

Patient was a known case of CAD - Post CABG, hypertension, cholelithiasis with non-functioning gall bladder, type II diabetes mellitus with diabetic nephropathy and end stage renal disease.

The patient initially presented with lower respiratory tract infection which was treated with antibiotics. In view of his azotemia and fluid overload he was initially treated with regular hemodialysis. He was there on continuous ambulatory peritoneal dialysis for CKD. He was also on regular treatment with insulin for diabetes mellitus. He was drowsy for past one day and developed involuntary jerky movement? Myoclonous, secondary to systemic encephalopathy. On 3rd night he developed high grade fever and sensorium deteriorated. He was shifted to AB8 - ICU on 4th early morning (5:00 AM). He was intubated, put on a ventilator and was on inotropic support. Dialysis was continued. He was diagnosed to have frank sepsis with septic shock. He had a cardiac arrest at 5:15 PM. Despite intensive resuscitation for one hour he could not be revived and was declared dead at 6:15 PM.
