

**ALL INDIA INSTITUTE OF MEDICAL SCIENCES
HOSTEL SECTION**

DATED: 23. 06. 2009

CIRCULAR

It is noticed that a large number of window type and split A/C units are being installed in various rooms of the hostels which is gross violation of Hostel Rules. This has resulted in frequent break down of electricity for longer duration and affecting the other residents /doctors/students, not even having the electricity for light and fans, as well as damage /burning of distribution boards, cables and electric panels, resulting in the loss of Institute revenue.

Every year we face the similar problem and the matter was taken up with the NDMC authorities for the sanction of additional load. But due to limitations, NDMC could not sanction the required load. The internal work of laying cables and distribution boards were got completed by the Institute. It has been observed that there were over 460 A/C's in April 2005. The number of A.C. users has increased day by day. This overload may result in breakdown of NDMC cables and panels of hostels.

The increasing number of A/C's and direct connection from the electrical main can cause a major fire in the hostel complex, endangering the life of the inmates and hostel property. Any fire resulting due to increasing number of window type A/C units shall be the direct responsibility of the resident/doctors/students.

It is therefore instructed to all the residents to remove their A/C's with immediate effect in best interest of themselves and other inmates.
