PROPRIETARY CERTIFICATE

AQUACEL[®] Ag Surgical Dressing

Hydrofiber[®] Surgical Cover Dressing with Silver

This is to certify that AQUACEL[®] Ag Surgical dressing is a proprietary product of ConvaTec. US Patent Nos. 8,828,424; 8,691,266 and European Patent Nos. EP1343510, EP1882482 and EP1904011; and Indian Patent No. IN217953.

AQUACEL[®] Ag Surgical dressing is a post-operative dressing which absorbs serosanguinous leakage and maintains a moist wound healing environment. The dressing is indicated for the management of wound healing by primary intent, e.g. traumatic and elective post-operative wounds and incisions.

AQUACEL[®] Ag Surgical dressing consists of an outer film which provides a waterproof, bacterial and viral barrier. The dressing's stitch-bonded Hydrofiber[®] (carboxymethylcellulose) pad contains ionic silver and absorbs serosanguinous leakage transforming into a gel that helps maintain a moist wound environment to support healing. The Hydrofiber[®] pad is sandwiched between a top layer of Hydrocolloid and a windowed skin contact layer also containing layers of Hydrocolloid that provides secure skin friendly adhesion and supports atraumatic removal. The silver in the dressing kills a broad spectrum of micro-organisms and helps reduce the risk of wound infection.

The unique combined stitch bonded Hydrofiber[®] and Hydrocolloid construction of the dressing has been designed to enhance extensibility and flexibility.

PROPRIETARY CERTIFICATE

ConvaTec Mouldable Technology

This is to certify that Natura™ Wafer Mouldable Technology is a proprietary product of ConvaTec.
Patent No 6,840,924.

Mouldable wafers are an ostomy body fitment for attaching an ostomy pouch to a person's body comprising of a shapable adhesive pad, and a shape defining member. In a first annular fixed shape zone, the shapable pad is supported and shaped by the shape defining member. In a second central reshapeable zone, a portion of the adhesive pad is unsupported by the shape-defining member, and can be moulded to fit an individual's stoma. A flexible flange for removable adhesive attachment to an ostomy pouch has an attachment zone outside the periphery of the shape defining member, to reduce direct application of external forces.
